-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on *05 February 2003* .

2a)☒ This action is **FINAL**. 2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *1-11* is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *1-11* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11)☒ The proposed drawing correction filed on *05 February 2003* is: a)☒ approved b)☐ disapproved by the Examiner.

If approved, corrected drawings are required in reply to this Office action.

12)☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

13)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a)☐ All b)☐ Some * c)☐ None of:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____ .

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

14)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).

a) ☐ The translation of the foreign language provisional application has been received.

15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____ .
4) ☐ Interview Summary (PTO-413) Paper No(s). _____ .
5) ☐ Notice of Informal Patent Application (PTO-152)
6) ☐ Other: .

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 6-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Horrita et al. (U. S. PAT. 5,469,081).

In claim 1, Horita et al. teaches all claimed features in Fig. 2, a circuit for generating a single asynchronous signal pulse at an output (OP1) of an integrated circuit (11, 12), the circuit comprising: (a) an integrated circuit comprising a push-pull driving circuit (12) having a first and second transistor (MP1, MP2) including control terminals (gate terminals) being controllably independent, load paths being arranged in series and between a first and second supply potential (Vd and ground), and a centre tap (OP1) connected with an output terminal of the integrated circuit; and (b) a single resistor (R) being externally coupled with the output terminal of the integrated circuit and being of a pull-up or pull-down type, wherein the type of the resistor determines, by application of a first control pulse (when LG is logic 0, thus logic 0 is at the terminal gate of MP2) on the control terminal of the second transistor and then a second control pulse (logic 1 is at the gate terminal of MP1) on the control terminal of the first transistor, whether a single positive or a single negative control pulse being asynchronous to the applied control pulse and of the same duration is applied on the output terminal,

wherein a waiting time (due to the delay of any one inverter) is provided between the first control pulse (logic 0) and the second control pulse (logic 1), in which the two pulses do not overlap; wherein one of the two control pulses (logic 1 at the terminal of MP1) is generated from the other of the two control pulses by an inverter delay device (IN1).

In claims 6-8, Horita et al. teaches all claimed features in Fig. 2, a circuit for generating a negative signal pulse (intended use, no patentable weight given) in response to receiving a sequence of a positive and negative control pulse (logic 1 and logic 0), the circuit comprising: (a) a first transistor (MP1) including a control terminal (gate) and a load path connected between an output terminal (OP1) and a first supply potential (Vd) for receiving a negative control pulse (logic 0) at the control terminal; (b) a second transistor (MP2) including a control terminal (gate) and a load path connected between the output terminal (OP1) and a second supply potential (ground) having a potential less than the first supply potential for receiving a positive control pulse (logic 1) at the control terminal in a sequence with the control terminal of the first transistor receiving the negative control pulse; and (c) a pull-up resistor (R) connected between the first supply potential and the output terminal for generating a negative signal pulse (intended use) at the output terminal in response to the control terminals receiving the sequence of negative and positive control pulses; wherein a waiting time (delay) is provided between the sequence of negative and positive control pulses such that the control pulses do not overlap (due to the delay of any one inverter); and an

inverter delay device for generating one of the first and second control pulses from the other of the two control pulses.

Claims 9-11 are essentially the same scope of claims 6-8. Therefore, they are rejected in similarly.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horita et al. in view of Taguchi (U. S. PAT. 6,160,417).

In claim 4, Horita et al. teaches all claimed features in Fig. 2 as explained above; with the exception wherein the first transistor is a P-channel MOS transistor and the second transistor is an N-channel MOS transistor. However, Taguchi teaches in Fig. 3 wherein the first transistor (13) is a P-channel MOS transistor and the second transistor (14) is an N-channel MOS transistor, the control connection (the gate electrode) of the first transistor (13) being inverted (PMOS transistor inherently having inverting gate electrode).

Therefore; it would have been obvious to one ordinary skill in the art at the time of the invention was made to form a push-pull circuit by selecting two different types of transistors instead of using same types of transistors as shown in Fig. 2, circuit 12, of Horita et al., as a matter of design choice based on system involved.

In claim 5, Taguchi further teaches in Fig. 3, the circuit as claimed in claim 4, wherein the first transistor (13) and the second transistor (14) form a CMOS inverter (12) with independent control gate connections (separate gate electrodes).

5. The Examiner respectfully would like to point out that the reference of Mizukami et al (U. S. PAT. 5,111,080) also anticipates applicant's invention.

Response to Arguments

5. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vibol Tan whose telephone number is (703) 306-5948. The examiner can normally be reached on Monday-Friday (7:00 AM-4:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike J. Tokar can be reached on (703) 305-3493. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-6251 for regular communications and (703) 305-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0959.
